ITPACT
## Assignment June 08, 2020

Instructions

1. All problems should be solved using loops.

2. In all the problems given below, please try to create the solution by using only the features of the programming language which have been discussed in the class so far.

———— ○ ————

1. Write a program that prints all elements of a list in the same order.

   (**File:** `print_list.py`)

2. Write a program that prints all elements of a list in reverse order.

   (**File:** `print_rev_list.py`)

3. Write a program that computes and prints the product of all elements of a list.

   (**File:** `print_prod.py`)

4. Write a program that prints 'True' if a number is already present in a given list, 'False' otherwise.

   (**File:** `find.py`)

5. Write a program that finds and prints the maximum element in a list.

   (**File:** `max_list.py`)
